Hebel PowerFloor[®]

Hebel PowerFloor[®]

A sound investment for your home.

Get the solid feel of concrete, for a quiet and comfortable home.

Sound won't travel through the floor, making your home peaceful and quiet.

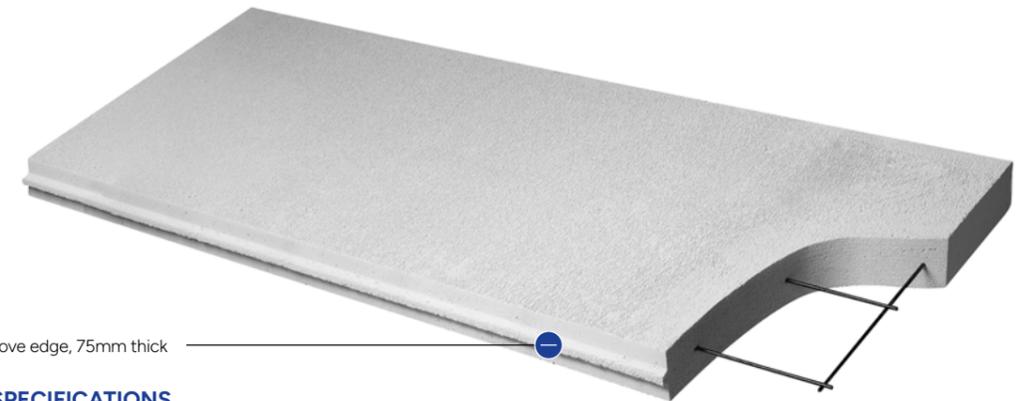

CSR

What is Hebel PowerFloor®?

Hebel PowerFloor® are structural floor panels, ideal for first floors and suspended ground floors, decks, and balconies as well as wet areas like bathrooms and laundries. They provide an excellent base for most floor coverings including engineered timber, hardwood, and vinyl flooring as well as carpet and floor tiles.

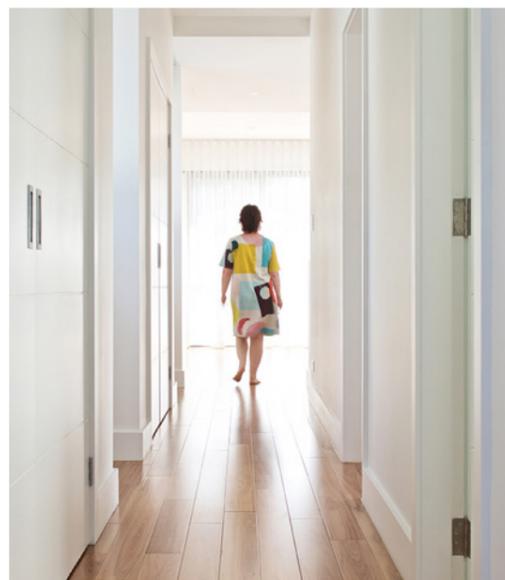

Hebel AAC 75mm floor panels are almost four times thicker than conventional 19mm structural flooring. This makes Hebel PowerFloor® squeak-free and provides high-performance acoustic and thermal insulation properties.

Tongue and Groove edge, 75mm thick

Hebel PowerFloor®

Often, it's the things that we don't see that make the difference to providing a great long term quality living experience. What you have under your floor covering can have a major impact on the tranquility of your home.

Creaks and poor sound insulation associated with standard particleboard flooring can result in noises from above becoming a major disturbance to peaceful living downstairs.

That's why there's only one Hebel PowerFloor®; the creak-free, solid alternative with superior insulation against both impact and airborne noise to help make your home a sanctuary.

SOLID UNDERFOOT

PowerFloor® is a highly versatile solid flooring system that gives you the underfoot feel of a concrete floor at a significantly lower cost. Installed over conventional joists, the system of thick AAC panels fit snugly together to form a strong, smooth floor.

FAST TO INSTALL

PowerFloor® is simple and fast to install with less mess than concrete and less wastage than particleboard and timber flooring. It is easily installed by on-site trades, such as carpenters, so there are no delays to the building schedule. Also, it doesn't warp or rot if it gets wet.

THE RIGHT CHOICE

Your selection of floor substrate is an important factor in your ongoing enjoyment of your home. Unlike other aesthetic features, it will be costly and difficult to change once you've finished building.

TESTED & COMPLIANT

The Hebel PowerFloor® panels are non-combustible. The system has a Fire Resistance Level (FRL) of 90/90/90 minutes for a fire source above the floor.

The Hebel PowerFloor® system complies with CodeMark CM40014.

MADE IN AUSTRALIA

Hebel PowerFloor® is manufactured right here in Australia, giving you confidence in local capability and support, and helping to keep jobs moving when time matters.

BENEFITS

Strong & solid

75mm thick steel reinforced panel, feels solid under foot like a concrete slab, without the price tag.

Quality & speed

Fast to install over timber or steel joists, not affected by weather during installation.

Energy efficient

Thermal mass and efficiency. Save on heating and cooling.

Noise reduction

Reduces noise transfer between floors.
